

As someone who travels frequently by car, the traffic & weather channels offered by XM Radio are essential. I know where the channels are and the information is current and frequent. I do not have the time to start searching radio channels while on the road to find a channel that will give me traffic updates, and when they do they are usually every 15 minutes at best. I urge you reject the NAM's petition 04-160, as it is not in the best interest of the general public.
